- ✓ Helping children cultivate a good posture habit
- ✓ Improving concentration and learning ability through posture training correction

High Elasticity Support

Raising Coccyx

Leverage movement

Air Hallway System

Poor posture in early childhood could negatively affect children’s growth. Prolonged time in slouched and/or slanted posture can stunt growth because they cause abnormal curvature of the spine and tilt the pelvis by putting uneven load on muscles, tendons and bones. Proper posture is also highly related to learning ability. Bending the head forward or tilting the head to one side for long periods of time can compress the blood vessels around the neck and prevent sufficient blood flow from the heart to brain. This prevents enough oxygen from being supplied to the brain and the person can lose concentration. It’s important to correct young children’s posture because their habits continue into adulthood. If bad habits stick early on, it becomes very difficult to correct them. Children have soft, flexible bones so they do not feel pain from poor postures. Also, children do not yet understand the importance of proper posture so it’s the parents’ responsibility to correct their posture.

Curble chair working principal LEVERAGE EFFECT

The highly elastic support with the principle of the lever ensures correct posture for your spine and waist.

The principle of the lever pushes the waist when you sit on Curble chair.

Your best choice for better posture

Curble kids recommended for	
Age	4~12 years old
Weight	10~35kg (22~77lb)
Height	60~150cm (2~5ft)
Curble Kids is good for kids age around 12. It is just recommendation not mandatory. However, since they grow fast, kids aged 12 or older are big enough to use Curble Comfy and Curble Chair Wider	

How to use

01

Place the product 10cm~15cm away from the backrest of a regular chair

02

Hold the product with both hands and put your hip seated deep to the end

03

Your body weight naturally pushes the waist and corrects your posture
